ARROYO ADVISORS

Prepared for Jordan Ellis, VP of Card Growth - Bear Down Bank

Arroyo Advisors will put the Wildcat Rewards pilot in front of the customers most likely to qualify

Our promise: a validated, ready-to-mail pilot list and a dashboard that shows whether the offer works, all before the January launch.

97
qualified customers already identified

5
Southwest states in the pilot

6
weeks to a pilot readout

Prepared for Data Visualization, University of Arizona. Course scenario using a provided dataset.

ARROYO ADVISORS

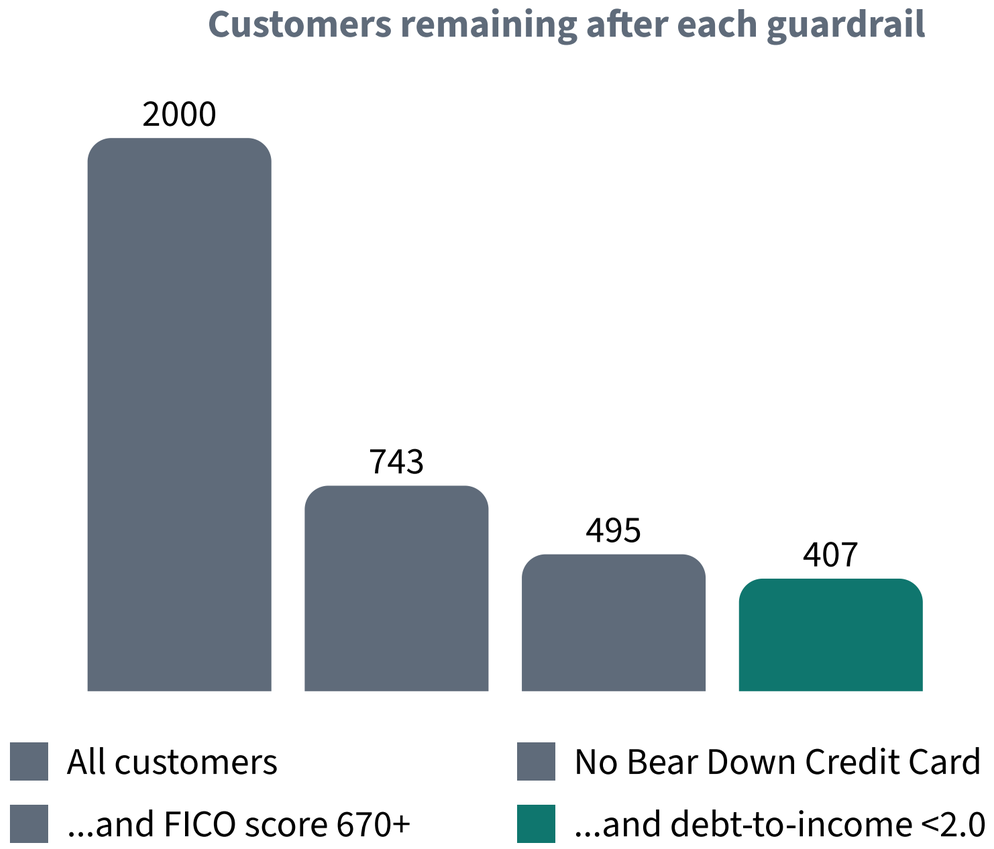

Four in five Bear Down customers can't be pre-approved, so an untargeted mailing would mostly miss

1,593

of 2,000 customers (79.65%) fail at least one Credit Risk guardrail

What doing nothing costs

A mailing sent across the whole customer base reaches about 20 qualified customers per 100 offers. The rest are letters Credit Risk will not approve, and a response rate that weak would hide whether the offer itself works.

All 2,000 customers analyzed; counts are distinct customers, not cards (5,802). Data as of September 30, 2026.

ARROYO ADVISORS

We answer three questions from your own customer and card data, with a result you can act on at each step

1 Who qualifies?

We roll every card up to the customer, then apply all three Credit Risk guardrails, so each person is counted once.

You get: A verified eligible list: 407 customers bank-wide at the 670 cutoff

Weeks 1-2

2 Where are they concentrated?

We compare the share of each group that qualifies, not raw counts, so big states don't win just by being big.

You get: The pilot group: 5 Southwest states where 44% qualify

Weeks 1-2

3 What if the cutoff moves?

A FICO slider recalculates the pool instantly, so Credit Risk can test a new cutoff in the meeting.

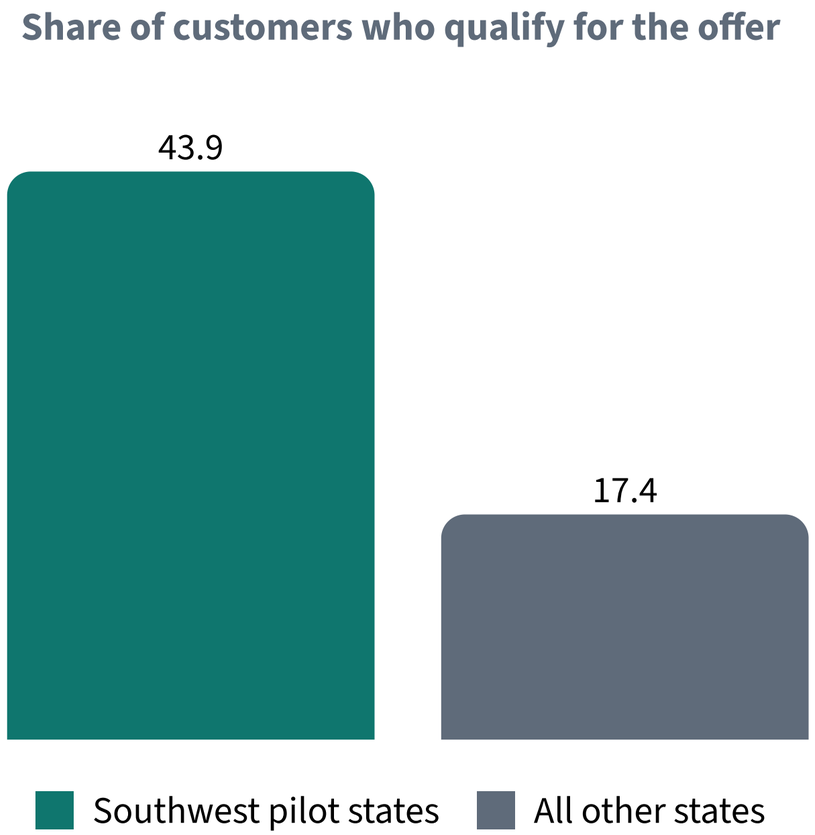

You get: The pool at any cutoff: 481 at 640, 407 at 670, 268 at 700

Available now

Data: Bear Down Bank customer extract (2,000 customers) and card extract (5,802 cards), linked on customer ID.

ARROYO ADVISORS

We already found the pilot group: 97 customers in five Southwest states, where 44% qualify

Eligible customers in the pilot

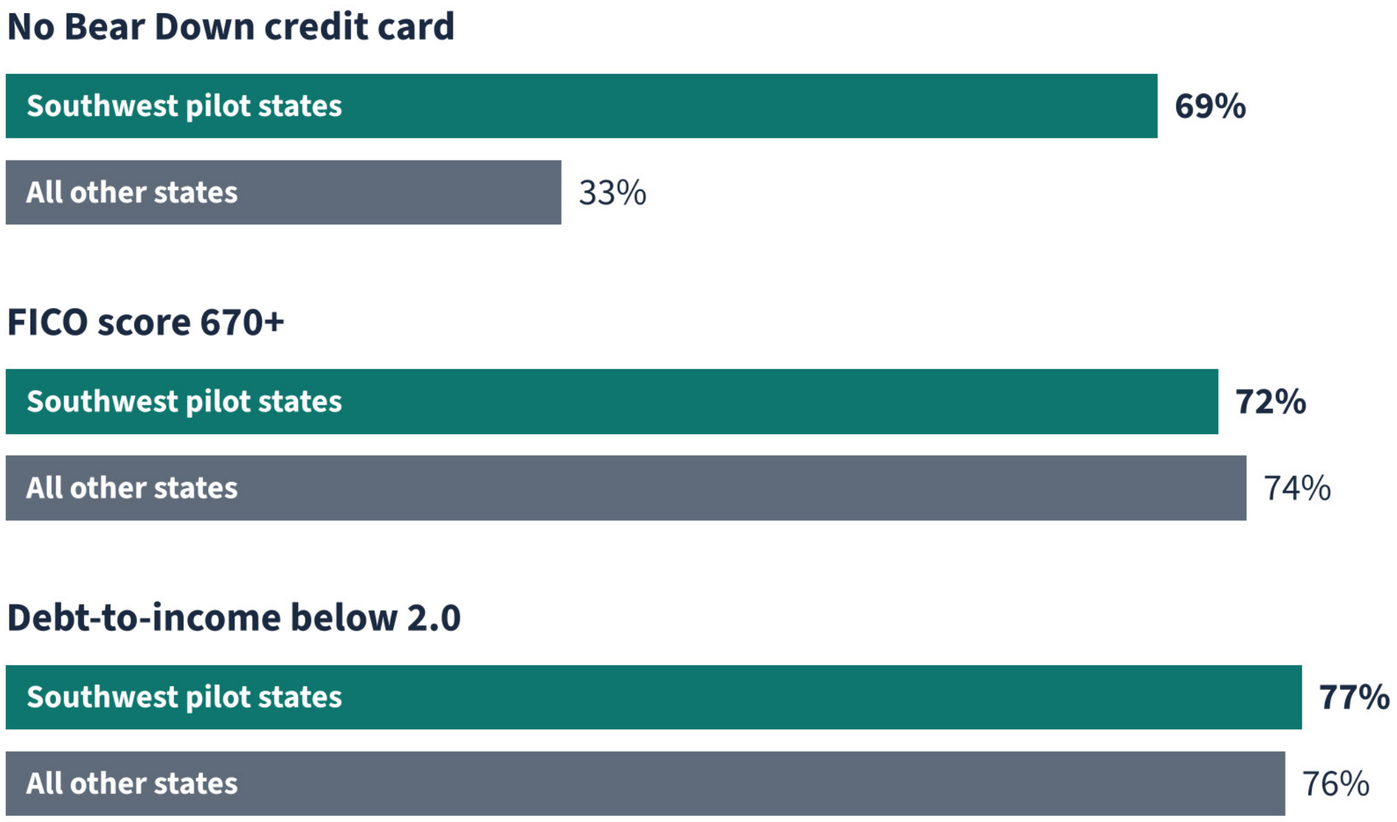

State	Eligible	Customers
Texas	68	159
Colorado	13	23
Nevada	6	13
New Mexico	5	14
Utah	5	12
Pilot total	**97**	**221**
All other states	310	1,779

Texas alone supplies 68 of the 97.

From our work sample. All 2,000 customers analyzed at the approved 670 FICO cutoff; debt-to-income = total debt ÷ yearly income.

ARROYO ADVISORS

A Southwest pilot will predict the national launch, because these customers have the same credit quality as everyone else

"Isn't the Southwest unusual?"

Only in one way. Southwest customers pass the FICO and debt-to-income guardrails at nearly the same rates as everyone else.

They qualify more often because 69% have no Bear Down credit card, versus 33% elsewhere. That is the gap the Wildcat Rewards Card exists to close.

Each guardrail measured separately. Southwest = TX, CO, NM, NV, UT (221 customers); all other states = 1,779 customers.

ARROYO ADVISORS

A six-week first phase delivers a validated pilot list and a response dashboard before the January launch

1

Weeks 1-2

Validate

Confirm the three guardrails with Credit Risk and re-run eligibility on the latest extract.

Deliverable: verified list of the 97 pilot customers

2

Weeks 3-4

Prepare

Build the mailing file and a dashboard that tracks offers sent, responses, and approvals.

Deliverable: mailing file and response dashboard

3

Weeks 5-6

Read out

Track early responses and compare them with a benchmark Card Growth sets before mailing.

Deliverable: readout with a go/no-go on the other 310 eligible customers

Scope: one question, one pilot group. National rollout and offer pricing stay out of phase 1, so the decision today stays small.

ARROYO ADVISORS

The decision today

Approve the six-week first phase today, starting with the 97-customer Southwest pilot

You approve

One six-week phase on one question: who receives the Wildcat Rewards pilot.

You get

A verified 97-customer list, a response dashboard, and a go/no-go readout.

Next step

A week-one kickoff with Card Growth and Credit Risk to confirm the guardrails.
